

Scenario:

You are getting ready to leave work. You decide that you want a snack from the vending machine downstairs, as they have just installed a new one that can be monitored with a certain app. If you recall correctly, the vending machine number downstairs was listed as vending machine number one.

Task 1: See if the vending machine downstairs has any snacks you like available for purchase.

Task 2: You heard from a coworker that a vending machine across the building was not working, and need to find where you can contact someone about the broken machine.

Task 3: Find a way to suggest a new item that can be added to the vending machine's inventory

Notes:

What I need to change:

- Make stock button easier to find
- Add color somehow
- Make it easier to find what can be interacted with and what can't

What I should keep the same:

- Positioning of elements
- All forms are fine
- Keep home screen extras where they are (Updates and Title bars)
